SCHEDULE B

FLOODPLAIN PROVISIONS

Pursuant to Section 910 of the *Local Government Act*, areas of the District of Logan Lake designated as floodplain are as follows:

Those portions of the land within the floodplain setback specified in Section 2 of this Schedule, and those portions of land lower than the Flood Construction Level specified in Section 3 of this Schedule.

1. Definitions

For the purpose of this schedule the following definitions shall apply:

Alluvial Fan means the alluvial deposit of a stream where it issues from a steep mountain valley or gorge upon a plain or at the junction of a tributary stream with the main stream.

Designated Flood means a flood, which may occur in any given year, of such magnitude as to equal a flood having a 200 year recurrence interval, based on a frequency analysis of unregulated historic flood records or by regional analysis where there is inadequate stream flow data available. Where the flow of a large watercourse is controlled by a major dam, the designated flood shall be set on a site specific basis.

Designated Flood Level means the observed or calculated elevation for the Designated Flood and is used in the calculation of the Flood Construction Level.

Flood Construction Level means the Designated Flood Level plus the allowance for freeboard and is used to establish the elevation of the underside of a wooden floor system or top of a concrete slab for habitable buildings. In the case of a mobile home, the ground level or top of concrete or asphalt pad, on which it is located shall be no lower than the above described elevation. It also establishes the minimum crest level of a Standard Dyke. Where the Designated Flood Level cannot be determined or where there are overriding factors, an assessed height above the natural boundary of the water body or above the natural ground elevation may be used.

Flood Proofing means the alteration of land or structures either physically or in use to reduce or eliminate flood damage and includes the use of elevation and/or building setbacks from water bodies to maintain a floodway and to allow for potential erosion.

[Note: The purpose of these conditions is to reduce the risk of injury, loss of life, and property damage due to flooding and erosion. However, the District of Logan Lake does not represent to the owner or any other person that any building constructed or mobile home or unit located in accordance with the following conditions will not be damaged by flooding or erosion.]

Freeboard means a vertical distance added to the Designated Flood Level and is used to establish the Flood Construction Level.

Habitable Area means any room or space within a building or structure which is or can be used for human occupancy, commercial sales, or storage of goods, possessions or equipment (including furnaces) which would be subject to damage if flooded.

Heavy Industry includes such uses as manufacturing or processing of wood and paper products, metal, heavy electrical, non-metallic mineral products, petroleum and coal products, industrial chemicals and by-products, and allied products.

Light or Service Industry includes such uses as assembly, fabricating, light manufacturing, warehousing, wholesaling and food processing.

Manufactured Home means a structure manufactured as a unit, intended to be occupied in a place other than at its manufacturer, and designed as a dwelling unit, and specifically excludes recreation vehicles.

Natural Boundary means the visible high water mark of any lake, river, stream or other body of water where the presence and action of the water are so common and usual and so long continued in all ordinary years as to mark upon the soil of the bed of the lake, river, stream or other body of water a character distinct from that of the banks thereof, in respect to vegetation, as well as in respect to the nature of the soil itself (*Land Act*, Section 1). In addition, the natural boundary includes the best estimate of the edge of dormant or old side channels and marsh areas.

Pad means a paved surface on which blocks, posts, runners or strip footings are placed for the purpose of supporting a mobile home or unit.

Setback means a withdrawal of a building or landfill from the natural boundary or other reference line to maintain a floodway and to allow for potential land erosion.

Standard Dykes means those built to a minimum crest elevation equal to the Flood Construction Level and meeting standards of design and construction approved by the *Ministry of Environment* and maintained by an ongoing authority such as a local government body.

Watercourse means any natural or man made depression with well defined banks and a bed 0.6 m or more below the surrounding land serving to give direction to a current of water at least six (6) months of the year or having a drainage area of 2 km² or more upstream of the point of consideration.

Setback Requirements

Pursuant to Section 910 (4) of the *Local Government Act*, no landfill or structural support required to support a floor system or pad, shall be constructed, reconstructed, moved, extended or located:

- a) within 7.5 m of the natural boundary of a lake, pond or any structure for flood protection or seepage control or of any dyke right-of-way;
- b) within 30 m of the natural boundary of the Thompson River;
- c) within 15 m of the natural boundary of any other watercourse.

2. Elevation Requirements

Pursuant to Section 910 (4) of the *Local Government Act*, no building, manufactured home or unit, modular home or structure or any part thereof shall be constructed, reconstructed, moved, extended or located with the underside of a wooden floor system or top of a concrete slab of any area used for habitation, business, or storage of goods damageable by floodwaters, or in the case of a manufactured home or unit the ground level or top of the concrete or asphalt pad on which it is located:

- lower than 6 m above the natural boundary of the Thompson River;
 - nor lower than 1.5 m above the natural boundary of a lake, swamp, or pond;
 - nor lower than 1.5 m above the natural boundary of any other watercourse.
-
- a) The required elevation may be achieved by structural elevation of the said habitable, business, or storage area or by adequately compacted landfill on which any building is to be constructed or mobile home or unit located, or by a combination of both structural elevation and landfill. No area below the required elevation shall be used for the installation of furnaces or other fixed equipment susceptible to damage by floodwater.
 - b) Where landfill is used to achieve the required elevation stated in Clause 3 a) above, no portion of the landfill slope shall be closer than the distances in Clause 2 from the natural boundary, or the inboard toe of any structure for flood protection or seepage control, or the inboard side any dyke right-of-way, and the face of the landfill slope shall be adequately protected against erosion from flood flows, wave action, ice or other debris.
 - c) Foundations of construction in alluvial fan areas shall be designed by a Professional Engineer to ensure that structures are anchored to minimize the impact of flood, sediment and erosion damage; footings are extended below scour depth, or fill materials are armoured where elevation is achieved by fill, to protect against scour, erosion and flood flows.

3. Other Requirements

Clause 3 shall not apply to:

- a) a renovation of an existing building or structure that does not involve an addition thereto; or an addition to a building or structure that would increase the size of the building or structure by less than 25 percent of the floor area existing at the date of adoption of this Bylaw;
- b) that portion of a building or structure to be used as a carport or garage;
- c) farm buildings other than dwelling units and closed sided livestock housing. Farm dwelling units on parcel sizes 2.1 ha or greater and within the Agricultural Land Reserve are exempted from the requirements of Clause 3 a) but if in a floodable area shall be elevated one (1) m above the natural ground elevation. Close-sided livestock housing behind Standard Dykes as approved by the Inspector of Dikes is exempted from the requirement to floodproof but if not behind Standard Dykes shall be elevated one (1) m above the natural ground elevation;
- d) light or heavy industrial development which is required to floodproof to the Designated Flood Level;
- e) heavy industry behind Standard Dykes;
- f) on-loading and off-loading facilities associated with water-oriented industry and portable sawmills. Main electrical switch gear shall be placed above the Flood Construction Level.

SCHEDULE C

PARKING AND LOADING PROVISIONS

1. Application of Regulations

- 1.1 Space for the off-street parking and loading of motor vehicles in respect of a use permitted under this Bylaw shall be provided and maintained in accordance with the regulations of this section.

2. Exemption of Existing Buildings from Parking and Loading Requirements

- 2.1 The regulations contained in this section shall not apply to buildings, structures and uses existing on the effective date of this Bylaw except that:
 - .1 off-street parking and loading shall be provided and maintained in accordance with this section for any addition to any existing building and structure or any change or addition to such existing use.
 - .2 off-street parking and loading prior to the adoption of this Bylaw shall not be reduced below the applicable off-street parking requirements of this section.

3. Number

- 3.1 The number of off-street parking spaces for motor vehicles required for any use is calculated according to Table 1 of this Schedule in which Column I classifies the types of uses and Column II sets out the number of required off-street parking spaces that are to be provided for each use in Column I.
- 3.2 The number of off-street loading spaces for motor vehicle required for any use is calculated according to Table 2 of this Schedule in which Column I classifies the types of uses and Column II sets out the number of required off-street loading spaced that are to be provided for each use in Column I.
- 3.3 In respect of a use permitted under this Bylaw which is not specifically referred to in Column I of Tables 1 and 2, the number of off-street parking and loading spaces is calculated on the basis of the requirements for a similar use that is listed in Table 1 and Table 2.
- 3.4 Where the calculation of the required off-street parking and loading spaces results in a fraction, one parking or loading space shall be provided in respect of the fraction.
- 3.5 Where seating accommodation is the basis for a unit of measurement under this section and consists of benches, pews, booths or similar seating accommodation, each 0.5 m of width of such seating shall be deemed to be one seat.
- 3.6 Where more than one use is located on a parcel, the total number of parking or loading spaces to be required shall be the sum total of the requirements for each use.
- 3.7 Where more than one use is located in a building, the total number of parking spaces to be required may recognize the mix of uses and determine the number of spaces required based on the various portions of the building dedicated to each use.

- 3.8 Where more than one standard may apply to a use, the standard requiring the greatest number of parking spaces shall be used.

4. Location

- 4.1 Except for uses in the C1 or C4 zones, off-street parking spaces shall be located on the same parcel as the use they serve.
- 4.2 In the C1 or C4 zones, off-street parking spaces may be located on another parcel within 125 m of the building or use the spaces serve under the condition that legal assurances are established to ensure that the parcel is used only for parking serving the building or use.
- 4.3 Off-street loading spaces shall be located on the same parcel as the use they serve.

5. Standard

Dimensions of Parking Spaces

- 5.1 Each off-street parking space required by this Bylaw shall not be less than 2.7 m in width, 5.5 m in length and 2.2 m in height.

Dimensions of Loading Spaces

- 5.2 Each off-street loading space required by this Bylaw shall not be less than 3 m in width, 9 m in length and 4 m in height. In no case shall the length of the loading space be such that a vehicle in the process of loading or unloading shall project into any highway (including all roads and lanes).

Access to Parking Space

- 5.3 Adequate provision shall be made for individual entry or exit by vehicles to all parking spaces at all times by means of unobstructed manoeuvring aisles, having widths not less than:
- A. 7.5 m – where parking spaces are located at 90 degrees to the manoeuvring aisle providing access to the space
 - B. 5.0 m – where parking spaces are located at 60 degrees to the manoeuvring aisle providing access to the space
 - C. 3.5 m – where the parking spaces are located at 45 degrees to the manoeuvring aisle providing access to the space.

Surfacing of Parking Spaces

- 5.4 Parking spaces provided in the R5, C1, C2, C3, C4, C5 and M1 zones shall be hard surfaced with asphalt, concrete, brick or similar pavement so as to provide a surface that is durable and dust-free and shall be graded and drained as to properly dispose of all surface water.

6. Siting

- 6.1 No off-street parking space shall be located within 2 m of the front parcel line.

7. Handicapped Parking

- 7.1 Parking for handicapped persons shall be provided in accordance with the Building Code.

8. Ministry of Transportation and Infrastructure Standards

8.1 The Ministry of Transportation and Infrastructure may require parking in addition to the requirements of this bylaw, especially where lots are adjacent to a Provincial Highway.
